

ANTI-GRAVEL

GENERAL

CODE	DESCRIPTION
AS110	Anti-gravel black 500ml
AS120	Anti-gravel grey 500ml

DESCRIPTION

Anti-gravel is a coating spray made of synthetic resins and rubber. This product is mainly used as overspray protection against stone chips on spoilers and sills, providing protection against rust, road salt, water, ice and snow.

This fast-drying stone chip coating forms an attractive, elastic film after application. After the film has dried completely, it can be refinished with any type of paint system if desired. When using a water-based paint system, it is recommended to apply a primer coat first to optimise adhesion.

DIRECTIONS BEFORE USE

- Clean the surfaces to be treated of dirt, oil and rust until they are clean and dry
- Shake the aerosol can well before use
- Apply the film in several cross layers
- Recommended layer thickness: approx. 500 microns
- After use, spray the can upside down until only gas comes out, to avoid clogging the spray button
- Note: Do not spray on engine, gearbox, brake parts and exhaust system

DRYING TIMES

20°C (1000 mu nat) 24 hours

APPLICATION TEMPERATURE, °C

10 - 25

STORAGE

Cool (10°C - 20°C) and dry
