

## CARBON DUST MASK FFP2 WITH VALVE

### GENERAL

CODE	DESCRIPTION
DM30	Carbon dust mask FFP2 with valve

### DESCRIPTION

The Gerko FFP2 dust mask with valve and a carbon layer is a filtering half mask that filters at least 94% of fine particles from the air you inhale (such as sanding dust, fine dust, and other non-volatile particulates).

The exhalation valve makes it easier for exhaled air to escape, reducing heat and moisture build-up inside the mask and improving breathing comfort (especially during heavier work).

The carbon (activated charcoal) layer helps reduce certain nuisance odours and low concentrations of some organic vapours, but it is not full protection against solvent vapours (for that you need an appropriate gas/vapour filter, e.g. A1/A2).

### FEATURES

- FFP2 dust mask with carbon charcoal filter
- Carbon filter parts provide extra respiratory protection
- Protects breathing against all kinds of external influences such as dust particles, spray mist, aerosols, smoke and more
- Equipped with a soft foam on the inside at the height of the nose
- Comfortable wearing comfort
- Equipped with a nose clip
- Easy breathing/speaking
- With exhalation valve
- Suitable for people with glasses

### SPECIFICATIONS

Dust classification	FFP2 with carbon charcoal filter
Use	Maximum 8 hours
Main component	Non-woven
Harmonised standard	149:2001+A1:2009
CE	CE 2797
Packaging	15 pieces per box
