

PRESSURE SPRAYER

GENERAL

CODE	DESCRIPTION
HV10	Pressure sprayer 1L

DESCRIPTION

A pressure sprayer is a manually operated spray container used for the even application of liquids during various automotive refinishing processes. It is suitable for spraying cleaners, degreasers, water-based solutions, and other liquids used in surface preparation, cleaning, and finishing.

Thanks to its ergonomic trigger and adjustable nozzle, the user can easily switch between a fine mist and a direct jet, ensuring efficient and controlled application.

FEATURES

- Manually operated spray bottle (no compressed air or electricity required)
- Adjustable nozzle (mist and jet function)
- Suitable for water-based and light chemical products
- Even and controlled spray pattern
- Ergonomic design for comfortable use
- Transparent or semi-transparent bottle for level control
- Reusable and refillable
- Resistant to daily professional use

ADVANTAGES

- Efficient product distribution with minimal waste
- Quick and easy application on various surfaces
- Improves cleaning and preparation processes
- Versatile for multiple applications
- Cost-effective due to reusability and dosage control

APPLICATIONS

- Application of degreasers and cleaning agents
- Moistening surfaces for sanding or polishing
- Cleaning tools and components
- Preparing panels before painting

ACCESSORIES

Assortment coding caps 5st (CC05)
